

Greenway Health and Sage Payment Solutions— Delivering efficiencies through integrated payment solutions

Integrate your credit card payment options

More and more often, practices are seeing an increasing number of uninsured and underinsured patients, which means that you are probably processing more patient payments in your office. Sage helps you to easily accept credit card payments through Sage Exchange, which seamlessly integrates with Greenway Health, saving you time processing claims and increasing cash flow.

Speed payment processing

Designed to increase efficiency when collecting payments in the office, the Sage Exchange Desktop works with your practice management system, prompting you for authorization when final procedure data is entered into the system or when a payment is posted. The credit card information is transmitted through Sage Exchange, and authorization is received quickly; usually in just a few seconds. The carrier's response includes an authorization number and verification of credit card information.

See immediate revenue improvements

After you swipe the patient's credit card, you are given an authorization number. The transaction, along with all other transactions done throughout the day, is kept in a host batch. Each night, the host passes all of the transactions to your selected bank, where they are processed and deposited to your account. The next morning you can run a detailed report that shows you how many transactions were run and the total dollar amount that was deposited from the previous day.

You'll see an immediate increase in your revenue stream.

Solution overview

- Credit card processing is integrated to Intergy, Intergy Practice Portal and Medical Manager.
- Strict adherence to PCI security standards adds security to your system.
- Deposits to your bank are done automatically each night.
- A report is available for review each morning after deposits are posted.
