

What would it cost your practice to be down for a week or even longer?

The statistics tell a cautionary tale: Cybercriminals are redoubling their efforts to target healthcare organizations ... so practices need to do much more to protect themselves, their patients, and their valuable data from breaches and cybercrime.

32,000 cyber intrusion attacks per day per healthcare organization in 2017 ... more than double the amount other major industries are seeing. Average costs to retrieve data are generally in the tens of thousands of dollars.
