

# YOUR CURES ACT CHECKLIST

TAKE THESE STEPS TO PREPARE YOUR PRACTICE TO MEET 21ST CENTURY CURES ACT REQUIREMENTS.

## 1. UPGRADE TO THE LATEST VERSIONS

Although it's not required, we recommend you upgrade to the latest versions now – Prime Suite v18.30 or higher and Intergy v12.50.00.02 or higher. This way, we can start onboarding your data to the new Enterprise Data Hub (EDH) for a more seamless transition to Prime Suite v21 and Intergy v21 later this year.

## 2. BE PREPARED TO UPGRADE

Be prepared to upgrade to Prime Suite v21 or Intergy v21 as soon as they become available later this year – and no later than Dec. 31, 2022. These versions will be the required releases to be Cures Act-compliant.

## 3. GET SET UP ON GREENWAY PATIENT PORTAL

Giving patients the ability to “self-serve” and access, view, and download their data on the portal is one way to comply with Cures Act information blocking requirements. Be prepared to fulfill patient data requests – while this may be accomplished with paper records, electronic records are more convenient and will reduce the number of requests to your practice!

## 4. MOVE TO GREENWAY SECURE CLOUD

If you haven't already, move to Greenway Secure Cloud. On the cloud, you will be upgraded automatically to the latest compliant versions of your EHR. After all, you didn't go into healthcare to worry about version upgrades. Let us take care of those for you!

## 5. ENRICH YOUR KNOWLEDGE OF THE CURES ACT

Enrich your knowledge of the Cures Act and its requirements by visiting the 21st Century Academy page, your go-to destination for webinars, blog posts, and other resources. The Academy is now in session – join us!
