

TAKE THESE STEPS TO PREPARE YOUR PRACTICE TO MEET 21ST CENTURY CURES ACT REQUIREMENTS.

1. UPGRADE TO THE LATEST VERSIONS

As a Greenway client, you will need to upgrade to the latest release of Prime Suite v21 or Intergy v21. We recommend that you complete this upgrade as soon as possible for your practice. These are the minimum certified Cures Edition EHR versions. The timeliness of your organization's upgrade should be driven by the regulatory requirements of your reporting programs.

If you are not able to complete the 21C upgrade before January 1, 2023, you must ensure that you are on a version of Prime Suite or Intergy that supports the minimum data capture requirements for the 2023 regulatory reporting programs. Prime Suite v18.30 SP 2 or Intergy v12.55 or higher are these versions.

2. GET SET UP ON GREENWAY PATIENT PORTAL

Giving patients the ability to “self-serve” and access, view, and download their health data on Greenway Patient Portal is one way to comply with Cures Act information blocking requirements. Be prepared to fulfill patient data requests – while this may be accomplished with paper records, electronic records are more convenient and will reduce the number of requests to your practice!

3. MOVE TO GREENWAY SECURE CLOUD

By switching from an on-premise server to our cloud solution, Greenway Secure Cloud, we will automatically take care of your practices software upgrades, so you don't have to worry about them.

4. ENRICH YOUR KNOWLEDGE OF THE CURES ACT

Enrich your knowledge of the Cures Act and its requirements by visiting the 21st Century Academy page, your go-to destination for webinars, blog posts, and other resources. The Academy is now in session – join us!
