

Tribal & Urban Indian Health

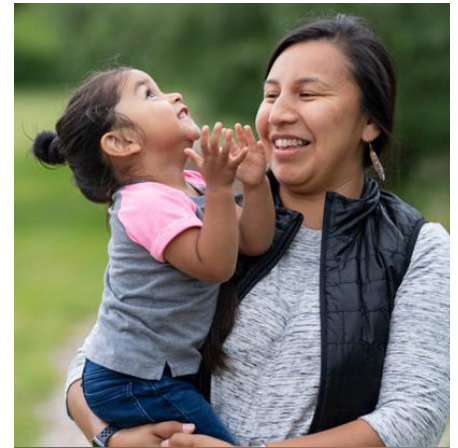

A Technology Solution for Tribal & Urban Indian Health Centers

For over 20 years, Greenway Health™ has provided cutting-edge healthcare technology to tribal health communities. Greenway Intergy™ integrates a reporting package tailored for tribal health communities into industry-leading electronic health record (EHR) and practice management (PM) products. This comprehensive solution ensures tribal health communities have the capability to **electronically document** every aspect of a patient's care, **seamlessly share information** with other systems, and **report patient data** to the federal government.

INDEPENDENCE

Tribal health centers serve their communities' healthcare needs and priorities. Greenway empowers these health centers by delivering flexible, adaptable solutions for their unique processes. We follow culturally sensitive protocols, and respect their sovereignty. Intergy has a powerful workflow engine that anticipates your next move and provides context-sensitive information on the fly. The software can be customized to match each of your providers' preferred workflows. Customizable areas include provider preferences, provider favorites (medications, orders, encounter notes, flowsheets and reports), questionnaires, checklists, chart layouts, templates (forms and letters), flowsheets, health guidelines and much more.

“Knowing that I don't have to worry about if Greenway is going to meet all the federal guidelines takes a lot of burden off of me.”

– William Ten Haaf, Quality and Services Manager,
Peter Christensen Health Center

CONNECT AND COMMUNICATE

Intergy offers comprehensive interface capabilities with any entity that is HL7 or API compliant, including hospital information systems, software supplied by third-party companies and clinical devices. These standards are used for inbound and outbound electronic transactions of patient demographics, appointments, outbound reports and financial data, either as real-time or batch interfaces.

Intergy empowers health centers to coordinate care and access critical information from medical practices, hospitals, laboratories, pharmacies and other care providers in their community. It also enables health centers to connect with health information exchanges (HIEs) to send and receive patient data.

PORTAL FEATURES:

- Patient appointment requests
- Patient registration via intake forms
- Patient demographic updates
- Prescription refill requests
- Patient chart summaries
- Lab results
- Secure messaging
- Online bill pay

INCREASE EFFICIENCY, GROW REVENUE

- **Purchase Referred Care (PRC)** — Capabilities that track member data, reduce expenses and optimize revenue.
- **Natational Data Warehouse (NDW) reporting** — Streamline the process of reporting complying with IHS requirements by capturing population, Special Diabetes Program for Indians (SDPI), Government Performance and Results Act (GPRA) and federally qualified health center (FQHC) reports as applicable.
- **Patient registration** — Input patient demographics, including tribal association, account number, employer, insurance policies and extended information (content you design).
- **Encounter documentation** — Reduce time spent recording a patient's visit; use the structured data to analyze trends and outcomes.
- **E&M coding** — Identify appropriate documentation support level; pass associated procedures and charges to pending charge area for coder evaluation.
- **Referral and authorization** — Manage incoming and outgoing referral types; gain immediate access to number of authorized visits, dollars allowed, approved procedures and expiration dates.
- **Knowledge links** — Access specific educational information (created by you or another source) electronically.
- **Treatment plans** — Design plans based on the patient's diagnosis; ensure treatment protocol is consistently followed.
- **Preventive measures** — Automate the tracking and compliance of preventive and condition-based medical care for patients.
- **Third-party billing** — Bill Medicare, Medicaid and private insurances; post and track payments with participating payers.
- **Interoperability** — Exchange relevant patient data and improve coordinated healthcare with bi-directional interface connectivity to labs, pharmacies and dental systems, as well as uni-directional interface connectivity with radiology practices.

OWNERSHIP AND CONTROL

Intergy is a completely paperless and integrated solution designed to meet the specific financial, clinical and administrative needs of tribal health communities. The system will enable your center to meet meaningful use requirements, qualify for incentive programs and report all required data to the National Data Warehouse (NDW).

Intergy features a robust, functional ONC-certified EHR that adapts to your providers' workflows.

RETRIEVE CLINICAL AND FINANCIAL DATA

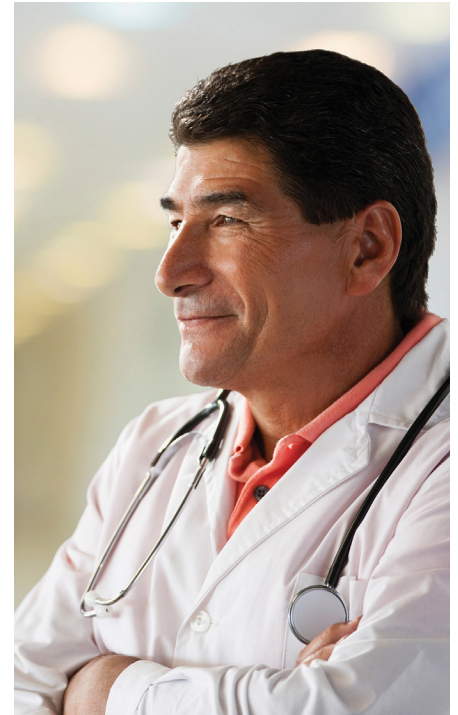

- **Utilize chronic disease management tools**, including health maintenance reminders and alerts for enhanced patient care.
- **Streamline workflows** with condition-specific orders based on established provider treatment patterns, including the ability to see treatment guidelines used by other providers.
- **Capture codified clinical data** for point-of-care documentation presented in a standardized format that maximizes reportability.
- **Perform drug utilization reviews (DURs)** during ePrescribing to check prescriptions for the correct dosage, drug interactions and other potentially unsafe conditions, as well as to generate drug information and patient education fact sheets.
- **Request and obtain diagnostic tests and results electronically** with integration directly into the patient record.
- **Scan, view and store miscellaneous electronic files**, such as office documents, patient-centric images and scanned images.
- **Effectively manage all lab requests and results** by employing Lab Portal Services, integrated functionality that eliminates the need for multiple point-to-point reference lab interfaces and replaces them with one bi-directional interface to and from a multilab clearinghouse.
- **Access real-time clinical flowsheets** to visualize treatment progress and effectiveness.
- **Provide specialized care** for patients with immunizations and vaccinations, etc. Intergy provides tracking and uploading to eligible states or entities.

Because Intergy is a structured documentation solution, clinical encounters and reporting requirements are easier to maintain and, more importantly, easier to update as requirements evolve.

- **User population reports** – Track, export and send data in compliant format to the NDW. With this process, health centers see an increase in user population numbers and visits through the scrubbing capabilities of the interface.
- **GPRA & SDPI reports** – Tailor Intergy EHR to track GPRA & SDPI reporting measures and submit results to appropriate governing body, area offices and/or NDW.
- **FQHC reports** – Track appropriate information on patient visits and submit the applicable reports for funding.

Intergy goes beyond your health center to coordinate care and access critical information from medical practices, hospitals, laboratories, pharmacies and other care providers in your community.

ANALYTICS

Intergy Practice Analytics™ is our business intelligence tool that enables dynamic reporting, as well as customized analytics to manage your health center. User-friendly dashboards support easy access to key organizational data and at-a-glance visibility into clinical and performance indicators, including clinical measures for meaningful use.

With the assistance of custom-designed dashboards, you have a powerful tool to assist you in meeting current and future clinical data tracking and reporting requirements.

STRENGTH

Intergy empowers health centers through every aspect of patient care, from scheduling to billing. With this technology, tribal and urban indian health centers are fully equipped to meet the evolving challenges of the healthcare industry and improve health outcomes.

ONC-certified and designed to help you achieve regulatory compliance without hindering your productivity and workflows. Intergy lets you focus on providing quality care as you qualify for funding source incentives, increase efficiencies and grow revenue.
