## Background on Standards Version Advancement Process (SVAP)

The Standards Version Advancement Process (SVAP) permits health IT developers to voluntarily update health IT products certified under the ONC Health IT Certification Program (Certification Program) to newer versions of adopted standards as part of the “Real World Testing” Condition and Maintenance of Certification requirement (§ 170.405) of the 21st Century Cures Act.

Using SVAP, Certified Health IT developers are permitted to voluntarily use a newer approved version of a standard than is adopted in regulation. Currently, this flexibility is limited to standards that are adopted in the certification criteria required to meet the “Real World Testing” Condition of Certification, which include § 170.315(b), (c)(1) through (c)(3), (e)(1), (f), (g)(7) through (g)(10), and (h).

Additionally, developers updating their already Certified Health IT Modules are required to provide advance notice to their clients and ONC-Authorized Certification Body (ONC-ACB) before adopting a newer approved version of a standard.

This document serves as Greenway’s advanced notice when utilizing SVAP to deliver updated standards.
